### About

Unlike large companies, SMEs have less technical human and financial resources to improve their energy efficiency. Barriers have been deeply investigated including lack of awareness, low capital, difficulty to access financing, doubts around actual saving potential and the lack of technical human resources. To provide SMEs with technical resources such as methodologies, best practices, technology inventories and subsidies, national schemes exist. Some of the schemes introduce mandatory actions (energy analysis) to obtain such subsidies. Nevertheless, national policy schemes have failed to some extent to convince companies that the energy audit is something more than a "bureaucratic fulfilment" to obtain a contribution and to push large companies to take the step from the analysis to the investment. To overcome that, DEESME aims at:

a) Enabling companies to manage the energy transition by taking profit of multiple benefits and energy management approaches,

b) Supporting the development and implementation of energy efficiency EU policies in the framework of article 8 of the Energy Efficiency Directive, beyond the project, by providing national authorities with guidelines and recommendations on how to strengthen the national schemes, and

c) Enhancing the adoption of the DEESME approach by National Authorities beyond the project timeline through the implementation of institutionalization activities.

The project identified and shared best practices from national schemes, EU projects and other initiatives with national authorities and support them in developing more effective schemes dealing with energy audits and energy management systems. It has assisted SMEs to develop and test the technical DEESME solutions by organizing information and training initiatives, realising energy audits and implementing energy management systems starting from international standard and adding the multiple benefits energy efficiency approach.

The project is built on a strong consortium of academics, research organisations, consultancies and government offices from Belgium, Bulgaria, Germany, Italy, the Netherlands and Poland, namely: IEECP (NL, coordinator), FIRE (IT), SOGESCA (IT), Fraunhofer ISI (DE), CLEOPA (DE), SEDA (BG), ECQ (BG), KAPE (PL), EEIP (BE).

The project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 892235.

### 1. Introduction to the monitoring strategy of Work Package 4

According to the DEESME proposal, each work package (WP) includes its dedicated monitoring activities. Work package 4 (WP4) of the project aims at implementing the DEESME campaign for energy efficiency in four EU countries: Bulgaria, Germany, Italy and Poland. This work package is focused on increasing the attractiveness of the solutions adopted by DEESME during the implementation of WP3 "Enabling companies to take profit of multiple benefits and energy management approach". After collecting and analysing the results obtained from the implementation of 50 energy audits and 25 energy management systems using the multiple benefits approach within WP3, consortium members sought to reach out to 50 project key actors and 2500 companies in order to raise the awareness of companies on the DEESME approach. The DEESME Campaign for Energy Efficiency further strived to encourage a wider number of companies to invest in energy saving measures, hence declining energy consumption trends and reducing energy demand in different sectors.

The specific objectives of the work package are:

- test the attractiveness of the solutions adopted by DEESME to encourage companies towards energy efficiency
- involve at least 2500 companies (minimum 500 in each of the 4 DEESME MS) by the end of the project, either directly (e.g. phone-calls and trainings) or indirectly (e.g. newsletters)
- involve at least 10 national trade associations and other key actors in each country
- provide the Institutionalization process (WP5) with working documents based on real scale and key actors' points of view

The monitoring activities in WP4 are to find out to what degree these specific objectives have been reached and to identify opportunities for improvement of the further implementation of the project. In other words, task 4.4 (T4.4) is to monitor the results and impact of the work package (Figure 1).

Figure 1 – WP4 monitoring strategy

This final monitoring report shows the results achieved by the campaign (and specifically on the indicators of this work package) at the end of the project's implementation period. Due to some delays in the implementation of the campaign itself – mainly due to Covid19 – the submission of this deliverable has been slightly postponed.

## **2.** Summary of key performance indicators (KPIs) and data requirements

According to the project proposal, the DEESME project shall attain a set of different key performance indicators within and beyond its duration. The overall set of indicators addresses different parts of the

project. Some of them relates to the activities carried out in WP4 (Table 1, summary of WP4 DEESME indicators)

Projec	ct Performance Indicator	Quantification	Measurement unit
	ators related to the DEESME nunication campaign	within project duration	
#1	Key actors with increased skills/capability/competencies with reference to multiple benefits and management (T4.1)	50 (10)	number/consortium (minimum number/country)
#2	Companies addressed during the DEESME campaign (T4.1)	2500 (500)	number/consortium (minimum number/country)
#3	Meetings with key actors (T4.1)	8 2	number/consortium number/country
#4	National events with companies (T4.2)	8 2	number/consortium number/country
#5	Training sessions and workshops with key actors and companies (T4.3)	12 3	number/consortium number/country

Table 1 – summary of WP4 DEESME indicators

### 3. Reporting on indicators

#### 3.1. Indicator #1: Key actors with increased skills/capability/competencies (T4.1)

#### 3.1.1. Overview

Prior to identifying the data needed to monitor the KPIs, it is important to understand how the target is defined.

According to the Grant Agreement, 50 key actors were foreseen to be directly involved within the project, and their skills/capability/competencies to increase during the project.

According to <u>D4.1 – Plan of the Communication Campaign</u>, key actors are defined as "various individuals, groups or organizations that are directly involved in the DEESME communication campaign with the aim to encourage companies to invest in energy efficiency based on the DEESME approach". A non-exhaustive list of such key actors includes: trade companies' associations, consortia and other companies' aggregators; energy consulting and certification firms; energy agencies; research organizations and universities; financial actors; regional and other relevant local authorities; media & press; general public.

**Quantitative indicator:** 50 key actors in total (minimum 10 per DEESME pilot country) **Qualitative indicator:** skills/capability/competencies will increase

#### 3.1.2. Data collection

#### Quantitative indicator

All national technical partners were required to fill in the Key Actors' Register – Annex 1 of Deliverable 4.1 (D4.1) – Plan of the communication campaign. Bi-monthly (at the end of every odd month), national technical partners were required to send the key actors' registers (table 2) to IEECP. IEECP has kept track of anonymized Key Actors in the General Key Actor register (table 3), in order to monitor the achievement of DEESME KPIs. Updated General Key Actors' Register has been included in Deliverable 4.7 (D4.7) - Intermediary monitoring report - Implementing the DEESME

campaign for energy efficiency (Task 4.4, IEECP) - month 27; and Deliverable 4.8 (D4.8) Final monitoring report on the attractiveness of DEESME approach - Implementing the DEESME campaign for energy efficiency (Task 4.4, IEECP) - month 36.

No	Name of Key actor	Type of key actor (dropdown menu)	Other type of key actor (describe)	Responsible partner (country)
1				
2				
3				

Table 3 – Sample of the General Key Actors register (Annex I)

#### Qualitative indicator

Recommendations from key actors for improving national schemes have been collected by the project partners in different forms. IEECP developed a simple survey which was translated and distributed to key actors in Bulgaria, Germany and Italy (see Annex II - Recommendations from key actors). In Poland, recommendations have been collected informally from working sessions with key actors (see indicator #5).

#### 3.1.3. Final results

#### Quantitative indicator

The total number of key actors involved was 72, which means that the general KPI of 50 key actors involved overall was reached. The KPI was also reached in all 4 DEESME countries where more than 10 key actors were involved.

As it can be clearly seen in the Annex I – General Key Actor Register – the state of play is the following:

Country	Number	Type of key actors		
Bulgaria	12	4 Universities or Research Organisation, 2 Financial Actors, 2 consortia of companies, 1 Energy consulting firm and 1 aggregator of companies, on top of an Agency of the Bulgarian Ministry of Economics in charge of industry and SME management, and 1 energy expert		
Germany	11	5 Companies' associations, 1 Companies aggregator, 2 Energy Consulting Firms, 2 Initiatives (Initiative energy efficiency networks – IEEN and Cluster Energietechnik Berlin Brandenburg), 1 Energy Agency.		
Italy	34	33 Trade companies' associations and 1 University		

Poland		9 Company aggregators, 3 regional authorities, the Ministry for Climate and Environment, 1 spokesman for SMEs and 1 Energy Consulting Firm.
TOTAL	72	

#### Qualitative indicator

Recommendations for improving national schemes were collected from the survey developed by IEECP for 21 key actors in Bulgaria, 1 in Germany and 11 in Italy. In Poland, recommendations were collected in the three conducted working sessions from an overall number of 30 key actors and companies.

The collected recommendations are reported in the Annex II.

#### 3.2. Indicator #2: Companies addressed during the DEESME campaign (T4.1)

#### 3.2.1. Overview

According to the Grant Agreement, the consortium was committed to involve at least 2500 companies in the 4 DEESME pilot countries (with a threshold of minimum 500 companies per country) in a communication campaign.

The process for the involvement of companies consisted of four steps, as graphically reported in figure 2: initial search and screening; identification & selection; establishing contact; engagement in the DEESME campaign.

#### Quantitative indicators:

- 2500 companies in total (at least 500 per DEESME pilot country)
- 20 newsletters and similar documents (at least 5 per DEESME pilot country)
- 5 web content published on websites (DEESME official website + the website of each national technical partner ECQ, CLEOPA, SOGESCA, KAPE)

#### 3.2.1. Selection of companies

Each country autonomously decided which companies to engage and how to engage them.

In **Bulgaria**, companies were approached through several channels:

1) Direct: ECQ has direct link with more than 100 companies in various sectors of the economy and contacted them for the DEESME campaign implementation. Furthermore, ECQ has a database with company contacts gathered from various public registers and events and used it to send them information regarding the campaign.

2) Indirect: ECQ exchanged a number of emails and phone calls with key actors aimed at securing their support in contacting companies. Both ECQ and SEDA had contacted key actors with regards involving both them and companies they are in touch with in campaign through their network. A total of 2000 stakeholders, the majority of which companies, were contacted throughout the campaign implementation in Bulgaria.

In **Germany**, Cleopa coordinates the Cleopa Energienetz with more than 10.000 companies, whose members are commercial (entities SME). Having in mind the dissemination effect of DEESME, Cleopa addressed all of them by paper newsletters with attractive information about energy efficiency, grants and funding and cooperation opportunities. In one of those newsletters more than 500 companies were selected and targeted with the DEESME information. All those companies had already business contact before and were also selected as multipliers towards more SMEs on their own customers lists.

In **Italy**, the company selection was based on existing direct relationships with SOGESCA. Moreover, SOGESCA liaised with partners operating in the same consulting services sector but with a slightly different focus, for example consultants working more on the incentives available for energy efficiency and other companies' investments rather than on technical energy consulting services to extend the reach of the communication campaign. Finally, SOGESCA and FIRE reached out to key actors like sector associations and involved and actively engaged them in the campaign in order to illustrate the DEESME multiple benefits approach and ensure their role as knowledge multiplier towards associated companies. FIRE extensively published articles on DEESME in the FIRE newsletter.

In **Poland**, when selecting companies, KAPE benefited mainly from cooperation with companies' associations and aggregators. These associations are located in different parts of the country and each of them has a large base of enterprises from its own region. Associations provided information about the project directly to the associated companies. In addition to companies that were informed about the project by companies' associations, KAPE also benefited from its existing contacts, which are the result of activities in projects including SMEs.

#### 3.2.2. Data collection

All national technical partners were required to note down all the communication sent to companies in the Communication Campaign Company Register (Table 4) and send it bi-monthly to IEECP who kept track of anonymized data in the General Communication Campaign Company Register (Table 5), in order to monitor the achievement of DEESME KPIs.

No	Name of company	Type <sup>1</sup> (drop- down menu)	Sector	(If network) Number of affiliates	Name and surname of contact person/s	Contact details (e- mail/phone number)	Mean of contact (drop-down menu) <sup>2</sup>

1						
2						
3						

Table 5 - Sample of the General Communication Campaign Company Register (Annex III)

#### 3.2.3. Final results

By the end of the project, a total of 1639 subjects were reached via the DEESME campaign, of which 1631 companies and 8 networks, representing more than 630,000 additional companies. This means that the general KPI of 2500 companies reached was greatly exceeded. The KPI was also reached in all 4 participating member states.

TOTAL	1639	
	Table 6: Compar	ies and networks addressed during the DEESME campaign

#### 3.3. Indicator #3: Meetings with key actors (T4.1)

#### 3.3.1. Overview

According to the Grant Agreement, 2 meetings per country were foreseen, with the aim of consolidating relationships with key actors and of improving the communication towards companies.

#### **Quantitative indicators:**

• 2 meetings with key actors organized per DEESME pilot country - 8 meetings in total

#### 3.3.2. Data collection

Each national technical partner was committed to organise at least 2 meetings with Key Actors in each of the DEESME pilot countries. National technical partners shared data on these meetings with IEECP, who collected all the material and included information in Deliverable 4.7 (D4.7) - Intermediary monitoring report - Implementing the DEESME campaign for energy efficiency (Task 4.4, IEECP) - month 27; and Deliverable 4.8 (D4.8) Final monitoring report on the attractiveness of DEESME approach - Implementing the DEESME campaign for energy efficiency (Task 4.4, IEECP) - month 36.

#### 3.3.3. Results

By the end of the project, meetings with Key Actors have been organised in all 4 DEESME countries, achieving the related KPI. In particular:

#### BULGARIA

ECQ organised four meetings (on 5/1, 12/2, 18/3 and 8/4) in 2022 with the "Club 9000" association which counts more than 600 members in Bulgaria.

#### GERMANY

Cleopa presented the DEESME MB approach at two editions of the EU Green Week, in 2021 (link to the event page <u>here</u>) and 2022 (link to the event page <u>here</u>), with a total of 211 attendees.

#### ITALY

SOGESCA and FIRE organised collectively 17 meetings with key actors between January 2021 and November 2022, and reached a total of around 140 participants.

#### POLAND

KAPE organised two meetings with Key Actors, one in December 2020 with 11 participants and 2 key actors and one in October 2021 with 140 participants and 8 key actors (here is the <u>event page</u>).

### 3.4. Indicator #4: National events with companies (T4.2)

#### 3.4.1. Overview

According to the Grant Agreement, building on the relationships with key actors, 2 meetings per DEESME pilot country were foreseen with companies, to present the DEESME idea and the DEESME multiple benefits approach. In total, 500 companies had to participate in national events in the 4 DEESME pilot countries (at least 100 per country).

#### **Quantitative indicators:**

- 2 meetings with companies organized per DEESME pilot country 8 meetings in total
- 500 companies participating in the national events (at least 100 per DEESME pilot country)

#### 3.4.2. Data Collection

Each national technical partner was committed to organise at least 2 national events with companies in each of the DEESME pilot countries.

#### 3.4.3. Final Results

By the end of the project, national events with companies have been organised in all 4 DEESME countries, reaching the target. In Poland, the target was surpassed with 3 national events hosted. In particular:

#### BULGARIA

ECQ presented DEESME in a national event on the 29 November 2022. Over 100 participants in physical presence and more than 30 online.

A second national event was hosted on the 16 November 2023, with 49 participants in physical presence.

The agendas of the two meetings can be found in Annex IV.

#### GERMANY

Cleopa held two national events: the Cleopa Global Recycling Day (39 attendees) and the Brandenburg Energy Day (300 attendees). Agendas can be found in Annex IV.

#### ITALY

SOGESCA presented DEESME in two national events in Italy on the 17<sup>th</sup> of November 2022 and 8<sup>th</sup> February 2023. More details can be found at the following links:

- First National Event in Italy
- <u>Second National Event in Italy</u>

#### POLAND

KAPE presented DEESME in three national events:

One online session of the EUSEW on the 26 October 2021(<u>here</u>) with 14 companies participating;

One in person session at the Second National Round Table on Financing Energy Efficiency in Poland (here) attended by 91 participants (11 companies);

One in person session at the IV Radomsko Entrepreneurship Forum

"Where is the economy going?" (here) attended by 34 participants (12 companies)

#### 3.5. Indicator #5: Working sessions with key actors and companies (T4.3)

#### 3.5.1. Overview

According to the Grant Agreement, information, training sessions and workshops (3 working sessions per country) were foreseen to keep the involvement and attention high and to gather added value elements from the participant organisations.

#### Quantitative indicators:

• 3 training sessions with key actors and companies organized per DEESME pilot country – 12 workshops in total

#### 3.5.2. Data Collection

Each national technical partner was committed to organise at least 3 training sessions or workshops with key actors and companies in each of the DEESME pilot countries.

#### 3.5.3. Final results

At the end of the project, working sessions with Key Actors and companies were organised in all 4 DEESME countries. The target has been achieved in Germany, Italy and Poland, while in Bulgaria 2 working sessions with high attendance (41 key actors and 92 companies in total in Bulgaria) were organized. In Annex V the agendas of all the listed working sessions are reported. In particular:

#### BULGARIA

Two working sessions were organised in Bulgaria: 40 key actors and 80 companies' representatives attended the first working session (hybrid, 29/11/2022); 1 key actor and 12 companies attended the second session (hybrid, 28/01/2023).

#### GERMANY

Three working sessions were organised in Germany: 1 key actor and 1 company attended the first working session (physical, 10/5/2022); 3 key actors and 1 company attended the second session (virtual, 31/1/2023); 1 key actor and 1 company attended the third session (virtual, 7/2/2023).

#### ITALY

Three working sessions were organised in Italy: 4 key actors and 13 companies' representatives attended the first working session (virtual, 30/9/2022); 27 key actors and 36 companies' representatives attended the second session (virtual, 17/10/2022); 4 key actors attended the third session (virtual, 27/10/2022).

#### POLAND

Three working sessions were organized in Poland: 7 key actors attended the first working sessions (physical, 9/11/2022); 17 key actors and 21 companies' representatives attended the second session (virtual, 30/11/2022); 5 key actors attended the third working session (virtual, 23/3/2023).

## Annex I – General Key Actors Register

				-
No	Name of Key actor	Type of key actor	Other type of key actor (describe)	Country
1	Energy Efficiency and Renewable Sources Fund (EERSF)	Financial Actors		Bulgaria
2	The Black Sea Energy Research Centre	Research Organisations		Bulgaria

## Annex II – Recommendations from key actors

informati	ave a clear understanding of which official websites to consult to obtain on on obligations, benefits and other aspects related to energy efficiency of the competent authorities / agencies, others)?
Bulgaria	Yes
e e	I am partially aware, but definitely not all the information comes to me.
	No, not sufficiently.
	Yes. I use such websites or web portals regularly.
	I think we are familiar enough because we know where to look for the information.
	No
	With official websites - yes.
	Yes. I think so. My work is in the field of energy efficiency, and I regularly follow the information
	that concerns me.
	Yes, we are familiar enough with the official websites and other portals in Bulgaria from which we can inform ourselves about obligations, benefits and other aspects related to energy efficiency, namely the governing bodies of programmes relevant to energy efficiency.
	Yes
	No, but I have an idea of how to look them up.
	No. Only application guidelines are published, but there are no direct dialogue campaigns. Regarding EE in multi-family residential buildings for example - deadlines for application are given, but no deadlines for approval and actual implementation of approved projects are provided.
	I follow the publications on the official websites of ministries, agencies and NGOs that are relevant to the topic of energy efficiency in Bulgaria. I also follow official publications on EU websites on this subject. Yes
	The information published on the website of SEEA regarding the obligations under the Energy Efficiency Act is up-to-date and comprehensive. With regard to energy efficiency benefits, there are still not clearly developed and easy-to-use end-user accessible materials that provide sufficiently understandable and technically uncomplicated information, not only for businesses but also for domestic end-users.
	Yes
	Yes
	To some extent
	No
	To some extent, if businesses have interest to do a consultation they can easily find SEDA site.
	Yes
Germany	This is very complicated for SME in Germany, likely to the federal structure. There are of course expert websites like ours and else the SME will look at their regional chambers of commerce as the first stop.

## Do you think you are aware of the incentives available to companies for energy audits, the energy management system and energy efficiency investments?

audits, the	e energy management system and energy efficiency investments?
Bulgaria	No
	Yes, I am aware of some of the programs. Companies are only interested in energy audits when they expect to get a grant associated with conducted energy audit. When companies are obliged to do energy audits every 4 years, they are not interested in the quality of the service, but usually look for the lowest price. At low prices, energy audits are formal (usually the previous audit is copied and only the energy consumption is changed for the period). No
	There is currently no permanent incentive mechanism for energy audits, for SMEs as well as
	for large enterprises. Incidental interest appears when there are EU funding schemes. Since recently such procedures do not imply an audit, therefore the interest is minimal, almost non- existent. In addition, large businesses obliged to do audits do not worry about fines, respectively postpone the required audits in the years. There are dozens of new large businesses NOT on the indicative lists and NOT interested in energy audits. Thus, a huge proportion of SMEs and Large Enterprises have virtually NO regular interest in energy audits, and respectively are NOT actively pursuing an energy savings policy.
	If project funding programmes are seen as incentives - yes, we are aware. We have no information on other incentives currently in place
	Not entirely.
	To some extent
	Yes, I am fully aware.
	Reducing energy costs for businesses.
	Yes
	To some extent, as long as the topic is covered by the media.
	No
	I compare incentives in Bulgaria and in other EU countries.
	Yes
	The benefits to business of introducing energy efficient solutions and the need to carry out a comprehensive assessment of opportunities and needs through an energy audit and the subsequent introduction of energy management systems are relatively well known. On the other hand, we are not aware of any schemes providing grants or other targeted incentives to businesses specifically for carrying out energy audits or implementing energy management systems. The only exception is where these are envisaged as part of larger energy efficiency projects in grant-funded businesses under various programmes. Mostly for the large companies
	Yes
	Mostly for the large companies
	Mostly for the large companies
	Yes
Germany	It is very hard for an SME to monitor with an estimated 2000+ funding options in Germany
Italy	Yes
	Yes
	-

No
No
No No No No No No No
No

With reference to the existing incentive systems, do you think that a centralized information hub would be appropriate for information rather than a division of information availability between several subjects (e.g. State, Regions, Agencies, etc.)?

Bulgaria

This proposal makes sense. In any case, we will know where to obtain competent information. Now it is difficult to distinguish to which of the ministries the energy efficiency and renewable energy projects belong to. When there are grant schemes requiring energy audits, training of licensed companies must be mandatory. The tender for the training company should be conducted by an independent institution outside Bulgaria to avoid unregulated practices. The training companies should not be a close to the institution conducting the selection, but should have a proven international practice outside Bulgaria, and would be best if they are university professors.

Yes

Yes

Maybe there should be a centralised centre to cover both SMEs and Large Enterprises in Bulgaria. It should provide major updates on an annual basis.

The information and project management system built so far, although functioning mediocrely, provides a good opportunity to obtain information. I think it can be considered as a "centralised information centre".

#### Yes

If a virtual Centralised Information Centre is in question, this is what eufunds.bg is trying to do to a large extent, and also the Information System for Management and Monitoring of EU Funds - UMIS2020, where all announcements on operational programmes are published. They are administered by the Central Coordination Unit at the Council of Ministers, so the aspect of EU funding opportunities could be considered covered. However, incentive systems can also be set up by banking institutions and other international programmes, foundations - for all these other types of opportunities it would be useful to have an online platform where they are collected and systematized.

Yes, of course. Systematizing the information and making it accessible would contribute significantly to be better informed.

With regard to existing incentive systems, it would be useful to split the information between different bodies, depending on the different sector to which the incentive applies. Yes

This would be the best solution, because at the moment you have to search for information on a variety of sites, which leads to confusion and often turns away those interested in such opportunities.

Yes, there should be a single point for information. Otherwise, citizens are constantly being directed to different people and organisations.

The centralised option sounds attractive because it has certain advantages such as assured funding, credibility checks, preventing contradictions from different sources, etc. However, there are serious risks of bureaucratization of the system, late publications, etc. In my opinion, keeping different information sources for publishing up-to-date information to promote energy efficiency also has its advantages: For example, regional institutions have established relationships with stakeholders and can disseminate information in a targeted way. An

	information centre created in an international project can more easily transfer good practices, etc.
	Yes
	Yes. Currently, there is a large number of programmes providing funds and technical assistance to different types of beneficiaries, spread across different administrative units. The UMIS system, where notices for calls for proposals are published, is complex and not designed to be user-friendly for end-users. Moreover, it is not specialized only for energy efficiency schemes. There is a need for a simplified portal with a detailed purpose and guidelines specifically related to energy efficiency, providing information in separate areas for private and domestic end- users. The information could also be supplemented with opportunities to develop renewable energy as a complementary measure. Yes, a centralized hub with a short summary of each incentive + links would be helpful. No. In the subsidies-based market in Bulgaria, the companies are aware of the available financing schemes. Centralized information hubs or one-stop-shops will be appropriate for dissemination of the information and incentives related to energy efficiency. If it is online such an information hub will be very useful. If it is a city information center, it
	could be centralized but local branches will be also helpful.
	Centralized information hub is appropriate
Germany	This is a complex question to answer. Yes, it would be helpful to have a one-stop info hub, but nobody is either willing or capable to manage this amount of info available. So, the regional chambers of commerce or their counterparts for Handwerk are the easiest entry points for such info.
Italy	Yes
	Yes
	Yes
	Yes
of the sect	rence to the existing incentive systems, do you think that the involvement for trade associations would be appropriate in providing information? Do
Bulgaria	any suggestions on this? If more information will reach us this way, why not?
	My experience shows that industry organisations are very far from the energy efficiency issue. I have had meetings with such organisations (bread-makers, etc.) but they were indifferent to my

have had meetings with such organisations (bread-makers, etc.) but they were indifferent to my presentations and the benefits of energy efficiency.

I think that there should be an independent body that cannot be influenced by other organisations.

Yes, it is useful to have industry organisations as an active part of a possible real incentive system for companies to carry out energy audits. This could be part of the membership policy of such organisations, to share experiences, run seminars, help set targets for the industry and report annually on the performance achieved by members.

Branch organisations can assist on specific issues related to the provision of incentives.

Yes

	It sounds logical for industry organisations to be involved in the process, they can certainly proactively disseminate information to their members, but on the other hand competition can also be a reason to hide information.
	Yes. It would be good for the industry organisations to provide information.
	We consider the involvement of industry organisations as appropriate to provide information regarding existing incentive systems. We do not have a proposal on this.
	The information channels can be varied, with one main channel per centralised system and additional channels at the industry organisations for example.
	I cannot decide. I think it depends on the branch organisation. Not everyone is active and responsible enough.
	Yes, in order to provide opportunities for informed choices.
	I believe that industry organizations know the needs of their members, maintain a list of their members and can successfully disseminate information related to energy efficiency.
	Yes
	Involvement of sectoral industry organisations can provide valuable information on specific areas as well as serve to disseminate information more widely. However, their involvement should play a supplementary rather than a leading and fundamental role, due to their potential interests which may not always be fully aligned with the direction of development of the energy efficiency sector.
	Yes, it would be useful.
	No
	Maybe it would be appropriate if they are really aware of the benefits of the energy efficient measures.
	Sector trade associations or the national trade association could be used to provide information, but it should be taken into account that probably they do not have expertise on these topics. Probably the information will reach mainly the bigger companies through these associations but many of the SMEs and micro enterprises are not their members.
	Involvement of sector trade associations is appropriate
Germany	See previous answer
Italy	Yes
	pinion, are companies aware on the added value linked to energy
efficiency: Bulgaria	Of course, I think they have added value - carbon footprint, reducing costs in the long term,
	boosting RES.
	Investments in energy efficiency are undoubtedly one of the most cost-effective measures. In the period 2004-2014, I have made an analysis of investments in energy efficiency and renewable energy on the basis of the current EBRD credit lines - they prove that such an investment is about 5.5-6 times more profitable than investments in new nuclear power, and at the old energy prices.
	L cannot answer this question

I cannot answer this question.

	Reduced energy consumption. Higher productivity. Savings.
	They have added value when implemented in reasonable time and at reasonable and realistic prices.
	Yes, when improving the energy efficiency of buildings and the production process.
	YES and in many ways - lower operating costs, better comfort, better health, saved emissions, saved air pollution and negative climate impact, etc.
	Investments in energy efficiency have significant added value, but only when implemented correctly and as prescribed.
	In our view, investment in energy efficiency improvements has added value for the country's economy and for reducing the costs of those for whom it is executed well. Energy cost reduction, Energy Efficiency = Energy Independence
	They certainly have benefits, especially in reducing electricity or gas bills when used for heating. This is the direct benefit for those who implement the measures. The indirect benefits are many and relate to reducing the human impact on the climate and nature. Increasing home comfort, quality of life and reducing energy bills
	Returns on investment in energy efficiency improvements are increasing as energy prices rise and companies face new EU requirements related to climate change. Compliance with these requirements requires long-term solutions and therefore timely information to SMEs on opportunities to restructure their operations brings them significant added value Yes
	Investments in energy efficiency, in addition to the direct financial benefits that can result from proper planning and implementation of activities, generally have many benefits for the end-users, such as improving the conditions of the working or home environment by achieving better comfort and a healthier environment. Depending on the implementation, such measures can also have aesthetic benefits.
	Mostly the large companies
	Mostly in the energy intensive industry
	Mostly the large companies
	Only a small share of all companies. For most of the companies, energy efficiency is not considered as an interesting issue, although the high energy prices. They are more interested in getting compensation from the State for the increased prices instead of saving energy.
	Mostly the large companies
Germany	No, they are only very little aware of the potential to save and/or earn more money. But often it starts at the point: who will pay for this? Who will benefit?
Italy	No
	No
	Yes
	Yes
	No
	Yes
	Yes
	Yes
	No
	Yes
	No

To increase the uptake of energy efficiency measures, do you think it would be useful to have more information on Non-Energy Benefits (e.g. "Multiple Benefits) related to energy efficiency? (examples of investments analysis, presentations of best practices, guidelines for evaluating multiple benefits)

Bulgaria	Yes
	Professional business plans and energy audits also take into account non-energy benefits - e.g.
	improved working conditions, environmental improvements, etc. These are as important as the
	direct benefits of reduced energy consumption.
	Yes
	Yes
	Yes
	Yes
	Yes, in general.
	Yes. At the moment I am not well informed about these benefits.
	It would be useful for us to have more information on the non-energy benefits that investments in energy efficiency improvements would bring.
	Benefit - increased price of the buildings.
	It would be interesting to me. I cannot identify a specific benefit at the moment.
	Yes
	The non-energy benefits of these investments need to be presented in an understandable way to SMEs through best practices, exchange of experiences.
	Yes
	Yes, this information would not only be useful, but could support a positive decision to introduce energy efficiency measures.
Germany	Yes, indeed this would be very helpful – I learned in these DEESME workshops a lot about multiple benefits, which could be benefit many SMEs. Still: who has capacities to do this? This cannot, in my understanding, be done as a personal consulting from the supplier side but must be done as a personal consulting from the beneficiary side.
Italy	Yes
	Yes
tools do y	ware of the non-energy benefits of the energy efficiency measures? What ou think could be useful for increasing the sensitivity and awareness of
	s CEO, managers, employees, etc. about non energy benefits? I don't understand the question.
Bulgaria	i don i understand the question.

Our company has included these topics in the questionnaire. We receive information directly from the companies subject to the energy audit.

Yes

Yes. All possible information channels - traditional media, especially public media such as BNT and BNR, websites, social networks.

No. I am not aware. Maybe different information campaigns, websites with a specific focus or newsletters.

We are aware of the non-energy benefits of improving energy efficiency. Further information needs to be incorporated in the programme guidelines about the non-energy benefits.

	No preferences
	I'm aware to some extent, there's probably a lot I don't realize. Well-organized awareness campaigns with good visuals, especially short videos, would be very effective. It would probably be good to make a YouTube channel specifically for this purpose and upload videos adapted into Bulgarian, as well as videos produced in Bulgaria. The tools of digital marketing should be actively used to promote this channel, as well as the website of the centralised information centre, if such one is to be created. TED Talk-style lectures by famous scientists would also attract many supporters. To some extent. I am interested to find more tools, especially for increasing housing comfort.
	Non-energy benefits include increased labour productivity, reputation advantages, savings on other resources such as water, reduced carbon emissions, rental and sales premia, and a variety of societal benefits. Non-energy benefits should be a permanent feature in energy efficiency-related information channels. Managing authorities of EU funding programmes, banks and other financing institutions should require the identification and even assessment of non-energy benefits of energy efficiency improvement investments.
	No Partially, non-energy benefits vary widely across sectors and measures. Non-energy benefits should be an integral complementary part of the information materials developed and can also be included as an explanatory annex when developing audits.
	They need to be clearly communicated (and if possible, quantified) by the auditor.
	Short communication materials (brochures) and presentations on different events related to the topic.
	Successful examples and good practices which brings real benefits
	First of all, a large-scale targeted communication campaign for the energy and financial benefits and for the possible project financing opportunities should be conducted. The non- energy benefits should be also explained in such a campaign. It will be best if the tool on non- energy benefits becomes official and so recognised by the financing institutions and considered when evaluating the project applications for financing. National information hub
Germany	Even if the low hanging fruits are harvested, then it is even more difficult to raise awareness in
	multiple challenging periods as we have right now.
Italy	Continuous attention and evidence of the concrete benefits that are obtained; With evidence and direct experimentation. Show the results achieved on initiatives taken
	Events, case studies, websites, industry associations; Practical cases, showing the benefits with small examples
	Propose training courses, also financed. Prepare exemplary guides on administrative procedures or applicable methods. Periodically provide very operational information, streamlined and perhaps with examples and organize a network of executives in the field who can share the experiences and choices made and the results achieved in periodic and short online meetings; Training, information and operational and specific suggestions of virtuous behaviors to be implemented in the specific working context. Webinars, specific reports with communication of useful data, sustainability reporting; Training opportunities offered by management, sustainability reporting Checklist; Handbook
	Increased comfort and productivity; Increased comfort and green value
	Meetings and trainings; Staff training and investment of part of the savings obtained for the implementation of benefits useful to staff (e.g. common recreation areas, green outdoor spaces, etc.)
	Meetings and trainings; Corporate training

Do you think that a unified and clear information framework (a set of structured guidelines) could be useful to help clarify the relationships between energy obligations – or NON-obligations - and sustainability? (e.g. Carbon Footprint, Corporate Sustainability Reporting Directive, Taxonomy). If yes, how do you think that this could be realized?

that this et	Julu Se Leunder
Bulgaria	Maybe only under pressure from Europe with clear rules and monitoring
	I would love to see such a framework and certainly ideas will come from our side on how best to do this. After all, we are a company with 20 years of international experience.
	Yes, but I do not know how this can be implemented.
	I would say, YES! Information centre for constant contact and exchange of information with particular people from enterprises, branch organisations, ministries, departments, associations, etc.
	Yes. With an information campaign and a website with the possibility for open discussions - questions and answers
	—
	I would rather say Yes, but I can't judge how to implement it. These are policies that need to be synchronized at European level.
	Yes. Such an information framework would be useful.
	We think that a uniform and clear information framework (structured guidelines) could be useful to clarify the relationship between obligations or lack of obligations regarding energy efficiency and sustainability. We think that such framework can be implemented.
	Yes, through a proposed list of guidelines and tools.
	Yes, for sure! I think my answers to the previous questions give ideas on how to do this. At the moment there are too many European regulations which are too difficult for non-lawyers to read and understand and check compliance with Bulgarian law. On the other hand, the lack of clarity in this respect is the reason for the lack of civil control and pressure on the state institutions that are responsible for implementing these regulations and for the changes that need to be made to our legislation and regulations. I am convinced that 99% of our 'legislators' cannot navigate through the sea of information and that our Parliaments eventually pass laws that are worked on by a very small group of people who are not always real experts. This, in turn, leaves broad room for lobbying.
	Yes, through a single electronic information system.
	Such a framework would be useful for SMEs. Their managers find it difficult to navigate the complex system of regulatory and other requirements at EU and national level. Yes
	The regulatory framework in the field of emissions and energy efficiency is highly fragmented, spread in a large number of documents. In order to facilitate its understanding and implementation, a simplified and clearly structured document is needed that is geared towards
	easy interpretation and application of the different requirements and rules by business, such as guidelines or a practical handbook.
Germany	It would be amazing to develop such a scalable framework. You have my full support on this!
Italy	Yes
	Yes
	Yes
	Yes
	Involving companies, going sector by sector
	Yes, however, the guidelines should be very clear and operational. Perhaps one could think of more publications intended for different audiences; for example, between "energy-intensive" and non-"energy-intensive" companies, by product sector or by the sustainability objective to be achieved or by means of communication to the stakeholders. It is not easy, it requires a large effort to design these guidelines.

No, I don't think that a single solution that embraces so many issues is efficient, I think it is better to diversify the regulations by going into more detail. Yes, such as guidelines summary

Yes

Yes, create a background document for companies as a guideline

#### Do you think that the Carbon footprint calculation could be associated to the energy audit to promote a "Organisation Carbon reduction" competition among obliged and non-obliged companies?

	bilged companies?					
Bulgaria	Yes, in general.					
	I'm not familiar with the methodology, but I think it's entirely possible.					
	Yes					
	Yes! To be part of the mechanism for this business.					
	It is possible if there are SERIOUS incentives.					
	Yes					
	It could connect, but I'm not convinced it would encourage competition					
	I do not think it is applicable to the working context in Bulgaria.					
	We believe that carbon footprint calculations can be linked to energy audits to encourage competition between obligated and non-obligated companies in terms of carbon reduction. Yes, it would be useful.					
	I haven't thought about this, but it sounds like a good idea.					
	It is possible, but there is still a lot of misunderstanding about what an energy audit is, what it is for, who the obliged and non-obliged parties are. Only when there is easy-to-understand information and awareness-raising campaign, could we proceed to include the carbon footprint. SMEs should be offered appropriate tools to calculate the carbon footprint of their activities. Then, SMEs need to receive incentives to reduce it. Only then can an energy audit demonstrate the results achieved and the use of the promised incentives. The biggest problem in Bulgaria, however, is that consumers do not take the carbon footprint into account when making purchasing decisions.					
	Yes					
	Yes, such an approach would be useful, but there should be a clear distinction between specific energy efficiency recommendations and measures and the additional aspects of carbon footprint calculations.					
	Yes					
	No, it would make the audit too complicated					
	Such a competition could encourage companies to reduce Carbon footprint only if it would be beneficial for their businesses, for instance - large communication campaign (for the purpose of advertising); some awards or prizes, etc.					
	No, it would make the audit too complicated, it is better to be a separate service which could be provided also by the energy auditors.					
	No, it would make the audit too complicated					
Germany	The (mandatory) energy audit as of EN 16247 could easily get enriched with this.

# Should the Carbon footprint be mandatory for companies obliged to carry out the energy audit?

Bulgaria	Yes				
	In the previous period it was mandatory to calculate greenhouse gas emissions as part of the energy audit. It is completely logical that the carbon footprint should also be calculated in the energy audit. Some companies have already approached us for such kind of service. Yes				
	Naturally! Energy and CO2 are parts of a whole.				
	If it will bring them SERIOUS benefits - yes.				
	If it will bring them SERIOUS benefits - yes.				
	I would say rather yes, but there should be a uniform methodology for measuring the carbon footprint. No, I don't think so.				
	Carbon footprint measurement should be mandatory for companies obliged to carry out energy audits.				
	Not as an obligation, but rather voluntarily.				
	As long as there are clearly defined rules and criteria and well-trained professionals, my answer would be yes. We should not put the cart before the horse, as usually happens in our country. In view of the EU's 2050 carbon neutrality policy, such an incentive could be included, but this would mean a new change to the EE certificate and assessment methodology, which would take a long time to be drafted and approved by the EU.				
	SMEs will adopt mandatory carbon footprint measurement if the benefits of this activity outweigh their service costs. Yes				
	Yes, but provided that its calculation will not be subject to additional effort and involves minimal costs.				
	Yes				
	Maybe				
	Yes				
	No, it should be voluntary				
	No, it should be voluntary				
Germany	I would inject the considerations on additional reporting obligations and the societal and environmental impact				
Italy	No				
	Yes				
	No				
	Yes				
	Yes				
	No				
	No				

	No
	to a strategic political perspective, do you think that the Energy audit
should be Bulgaria	overcome by the concept of "Audit of the use of resources"? Rather not, "resource" is a rather general term.
Jugun	People have a hard time accepting such changes. I think energy auditing is a well-established concept and should be maintained. But I have had interesting cases: when visiting an industrial plant, people are afraid when they find out that energy auditors have arrived. Their expectation is that they will be inspected, which provokes suspicion and mistrust. I cannot say.
	Hardly resources are not only energy, but human, material, raw materials, etc.
	Resources is a very broad concept. There are many types of resources. The subject of an energy audit is ENERGY RESOURCES. In this context, I do not think that substitution is appropriate.
	Yes
	It depends on what we aim for. It is not a question of replacing concepts, but of changing the scope of the audit - the resource audit should include an assessment of the energy used as a resource or the loss of such, i.e. it makes an assessment of all kinds of resources, including energy resources.
	No. I don't think this substitution is appropriate. To me, resource audit is a broader definition, and the two concepts are different.
	From a strategic and political point of view, in our view, the term "energy audit" does not need to be replaced by the term "resource audit". This could be discussed further.
	In my opinion, a resource audit is a much broader concept than an energy audit. And the objectives of both types of audits should be different. I therefore think that the question posed in this way is incorrect. No
	It makes sense to do a resource audit, as well as an energy audit. For example, energy efficiency leads to savings in other resources too.
	I am not sure.
	Maybe
	Yes, but only for large companies
	Yes, for all companies
	This concept should be voluntary, If the investment in saving resources can improve the financial parameters of an energy efficiency project, then it will be wise to apply this concept. This concept should be voluntary
Germany	I really like this idea, but I fear the dimension of discussions which would be derived from this.
Italy	No
	Yes
	Yes
	No
	Yes

#### Yes

	ink that the risks associated with energy efficiency interventions should be y evaluated?
Bulgaria	No
	In a previous programme of the Ministry of Economy, an element of the energy audit included a section "Risk assessment". Our company was responsible for the training of energy auditors and frankly it was a new subject for the trained companies. My personal opinion is that in the audit there should be included a risk assessment and a risk matrix analysis. Yes
	I agree. The unassessed risks of implementing the measures can significantly affect a business!
	No. The risks are clear. There is grant funding – particular measures are being implemented. No grant funding provided - nothing is done. Not even preliminary preparations are made, such as planning for the recovery of technical documentation and energy efficiency audits.
	Yes
	Any risk assessment should be thorough.
	Yes. I think so.
	We believe that a thorough assessment of the risks associated with implementing energy efficiency improvement measures is needed. Yes
	Yes, in this case, as in any type of measure that is envisaged, a thorough risk assessment must be carried out.
	Yes, and possible risks can be covered for example - if the building system is not improved/rehabilitated - old/depreciated electrical system, old/depreciated plumbing, etc. A sound risk assessment of the implementation of energy efficiency improvement measures is mandatory. This is a mandatory requirement for any business venture.
	No
	There needs to be an assessment of the measures implemented, their compatibility with existing systems and conditions, effective and safe implementation, and a risk analysis of the possibility of not achieving the intended outcomes.
	Maybe
	Yes
	Yes
	It should be taken into account during the energy audit. If any measure is not appropriate it should not be proposed. Yes

Poland <sup>4</sup>	<ol> <li>In your opinion, are companies aware of the benefits of conducting an energy audit and implementing its results?</li> <li>What incentives could increase the participation of companies in energy efficiency measures?</li> <li>Could promoting the non-energy benefits of audits increase the number of SMEs auditing? What benefits are worth paying attention to?</li> <li>Would the development of information materials for companies increase the number of audits carried out? Would you be willing to share such materials with entrepreneurs?</li> <li>Would the obligation for auditors to indicate non-energy benefits of audits allow enterprises to better understand the benefits of implementing energy efficiency measures?</li> <li>Each question was thoroughly discussed, and we obtained recommendations, which are described below.</li> </ol>
	Main Conclusions
	Participants pointed out the need to emphasize the financial benefits of any activity of entrepreneurs. It was also noted that convincing entrepreneurs to carry out audits and implement their results will be difficult until they are obliged to do them. Audits are often perceived as time-consuming and require high investment costs, and also as not bringing measurable benefits to the company.
	Participants who work with entrepreneurs on a daily basis stated that communication with them is difficult and the means of communication and information should be carefully selected. Participants who work with entrepreneurs on a daily basis stated that communication with them is difficult and the means of communication and information should be carefully selected. According to them, cooperation with SMEs requires long-term relationship building, as there is a great distrust of new activities and unknown people among them. Therefore, in order to increase the probability of encouraging entrepreneurs to take actions for energy efficiency, it would be necessary to

<sup>&</sup>lt;sup>3</sup> This question was included only in the survey distributed in Bulgaria.

<sup>&</sup>lt;sup>4</sup> In Poland, recommendations from key actors have been collected informally within the working sessions

present them with examples of success stories and prepare an official list of certified auditors whom they could trust.

Entrepreneurs are also often concerned about the security of their data and hidden costs and administrative activities. Therefore, all incentives (including financial ones) should contain a clear description of the required activities and be accounted for in a simple way.

Participants emphasized the importance of indicating the non-energy benefits of audits, but considered it only an addition to the audit, emphasizing that what counts for the entrepreneur is mainly the financial benefit and, possibly, the impact of the implementation of the audit results on the effectiveness of production or sales.

# Annex IV - Agenda and pictures of National events with companies

Bulgaria

15:00 - 15:15	Декарбонизация и ниско-емисионно енергийно планиране и развитие на общинско ниво чрез проект PadovaFit Ина Кероев, Енергийна Агенция – Плоедив
15:15 - 15:30	Въвеждане на градски ниско емисионни зони за подобрение на качеството на въздуха Лилна Аджарова. Енергийна Агенция-Плоедив
15:30 - 15:45	Гражданската наука за подобряване качеството на въздуха чрез проект CompAir Милена Аголян, Енергийна Агенция – Плоедие
15:45 – 16:00	Покривни РV инсталации със системи за съхранение на енергия в социални домове за справяне с енергийната бедност и подкрепа на социалните дейности в общините Анеллина Томоев, Енергийна Агенция – Плоедия
16:00 - 16:15	Инструмент за пред-проектни проучвания за производство на водород, проект DanuP-2-Gas Вера Генадиева, Ангел Николаве, ЧИЕЦ
16:15 – 16:30	Акредитирани изпитвания за качество на био-горивата – гаранция за ресурсна и енергийна ефективност в отоплението от биомаса Ваня Маркова, Енергийна Агенция – Плоедие
16:30 - 17:00	Дискусия
17:00 - 18:00	Заключителни думи. Кафе за довиждане
30 November	Energy Transition and Energy Poverty – the new challenges
30 November Panel III	
	the new challenges Legislative Aspects for the Development of Energy Communities in Bulgaria and Good Practices in the European Union
Panel III	the new challenges Legislative Aspects for the Development of Energy Communities in Bulgaria and Good Practices in the European Union Moderator: Dr 2 Gravious Georgies, SCA SOFEM Energy Communities according to the European Directives and their Regulation in the Countries of the European Union
Panel III 09:00 – 09:30	the new challenges Legislative Aspects for the Development of Energy Communities in Bulgaria and Good Practices In the European Union Moderator: Dr Zdrawka Georgies SEA SOFENA Energy Communities according to the European Directives and their Regulation in the Countries of the European Union Dr Nada Nikolow-Deme, SEA SOFENA Legal Aspects of Energy Communities in Bulgaria
Panel III 09:00 – 09:30 09:30-09:50	the new challenges Legislative Aspects for the Development of Energy Communities in Bulgaria and Good Practices in the European Union Moderator: Dr. Zafavka Georgies, SEA SOFEMA Energy Communities according to the European Directives and their Regulation in the Countries of the European Union Dr Nadia Nikolow-Deme, SEA SOFEMA Legal Aspects of Energy Communities in Bulgaria Christian Dimitros, Greenpeace Good Practices for the Development of Energy Communities in the EU. The Experience of France
Panel III 09:00 – 09:30 09:30-09:50 09:50-10:10	the new challenges Legislative Aspects for the Development of Energy Communities in Bulgaria and Good Practices in the European Union Moderrator: D Zafowko Georgiey, SCA SOFEMA Energy Communities and European Union Pradio Nikolova-Deme, SEA SOFEMA Legal Aspects of Energy Communities in Bulgaria Christian Dimitro, Greenpeace Good Practices for the Development of Energy Communities in the EU. The Experience of France Marc-Antoine Andrieux, SEA SOFEMA Results of the CONGREGATE Project: Models for the Development of Energy Communities Softa, Dobrin and Burgas
Panel III 09:00 - 09:30 09:30-09:50 09:50-10:10 10:10-10:30	Use new challenges           Legislative Aspects for the Development of Energy Communities in Bulgaria and Good Practices in the European Union Moderator Dr 2014avia Georgies, SEA SOFEMA           Energy Communities according to the European Directives and their Regulation in the Countries of the European Union Dr Nodia Nikolowa-Deme, SEA SOFEMA           Legial Aspects of Energy Communities in Bulgaria           Drividia Nikolowa-Deme, SEA SOFEMA           Good Practices for the Development of Energy Communities in the EU. The Experience of France           Marx-Antoine Andriew, SEA SOFEMA           Results of the CONREGATE Project: Models for the Development of Energy Communities in Sofia, Dobrich and Burgas           Draganir Tsonev, Enffect           Bulgaria's Need for Legislation and Policies for RES Development

# Second Event

#### AGENDA

#### National Information Campaign DEESME: "Developing National Schemes for Energy Efficiency in SMEs"

Kepler Hall, Launchee Space

TsUM, Blvd. Knyaginya Maria Louisa 2, Sofia, 1000, Bulgaria

16 November 2023

Schedule	Торіс
15:00 - 15:30	Registration and welcome coffee
15:30 - 15:40	Official opening of the event
15:40 - 16:00	State of Energy Efficiency in the Industry Sector. Amendments to the Energy Efficiency Directive.
	Tsvetomira Kulevska Director of DG "Coordination and Management of EE and RES", SEDA
16:00 - 16:30	The DEESME Approach: Supporting Bulgarian enterprises in the process of energy auditing and implementation of energy management systems with a focus on the multiple benefits of improving their energy efficiency
	Margarita Angelova European Center for Quality Ltd
16:30 - 16:50	ISO 50001: Implementing energy management systems for a sustainable future
	Doc. Marko Dimitrov TŰV NORD Bulgaria Ltd.
16:50 - 17:10	DEESME 2050: Developing Energy Efficiency Projects in SMEs for European 2050 targets
	Margarita Angelova European Center for Quality Ltd
17:10 - 17:30	Implementation of the ECCO mechanism in Bulgaria
	Kiril Raichev Alliance for Energy Efficiency
17:30 - 18:00	Open discussion and opportunity for participants to present projects and initiatives
18:00 - 19:00	Closing of the event and cocktail

#### Giovedì 17 novembre | 9.00 - 16.00

#### FONDERIA 2022: AMBIENTE, SICUREZZA, ENERGIA

Coordinatori: Gualtiero Corelli (mattina) – Roberto Lanzani (pomeriggio)

- 09.00 Apertura Congresso
  - Introduzione ai lavori: Presidente Assofond, Presidente AIM, Presidente CT Fonderia
     Premi di Studio Assofond
  - Premi Ing, Carla Cominassi, Istituiti da GHIAL Spa
- La cattura delle polveri aerodisperse e la riduzione degli odori nelle fonderie con il sistema brevettato Zehnder clean air solutions Luigi Dotti (Zehnder Group Italia Sri) luigi.dotti@zehndergroup.com 09.40
- Efficientamento energetico fonderie: quanto si può risparmiare ottimizzando i ventilatori? Diego Perfettibile (Pbn Sr) diego.perfettibile@pbn.it La gestione dei rifiuti della fonderia sotto controllo 10.00
- 10.20
- Paolo Vannucchi (Teuron Srl) pvannucchi@teuror Sistemi di controllo negli impianti di filtrazione fumi 10.40
- Carmelo Alessi (Ital Control Meters Srl) alessi@italcontrol.it
- Pausa 11.00
- Riduzione delle emissioni nei processi di fonderia
- Piero Venchi (Ask Chemicals Italia Srl) Piero Venchi@ask-chemicals.com
- Migliorare la competitività grazie al benefici multipli dell'efficienza energetica Giovanni Franco e Roberto Galvanelli (Sogesca Sri), Dario Di Santo e Livio De Chicchis FIRE | 11.40
- Federazione Italiana per l'uso Razionale dell'Energia g.francoOsogesca.it Gli indici di prestazione energetica nel settore delle fonderie industriali Claudia Toro (ENEA) claudia.toroOenea.it Simulazione delle emissioni di CO<sub>2</sub> generate dal processo di fonderia 12.00
- 12.20 Luca Colombo (Novacast), Matteo Pesci, H. Fransson e M. Hagbyhn (HA Italia SpA) luca colombo@ha-italia.com 12.40 Le opportunità dei sistemi di accumulo per le industrie
- Martina Ravasi (Energy Team SpA) martina.ravasi@energyteam.it
- Pausa pranzo Soluzione di Energy Saving basato sul controllo dei picchi di tensione 13.00 14.00 Michele Magri (Tesi SpA), Davide Polotto (MADE Competence Center Industria 4.0), Filippo Borea (Icopover SrI) - michele.magri@tesi-spa.it: davide.polotto@made-cc.eu;
- filippo.borea@icopa 14.20 La tassonomia sulla finanza sostenibile: una "rivoluzione copernicana" per le imprese
- Nicola Fabbri (Ergo Srl) nicola fabbri@ergosrl.net Risparmio energetico, sicurezza sul lavoro e standardizzazione dei processi per forni a 14.40 frequenza di rete
- Riccardo Dasena e Roberto Pavan (Insertec Italia Srl) rdossena@insertec.biz; pavan.roberto@insertec.biz Effetto di trattamenti termici innovativi sulle proprietà di componenti in lega AlSi10Mg ottenuti 15.00
- mediante pressocolata e manifattura additiva Marco Galli (Università degli studi di Brescia) marcogalli970gmail.com Recupero di scarti metallici da fanghi di rettifica: la svolta circolare di Bombardi Srl 15.20 Alfredo Tronci e Fabio Tosini (Bombardi Rettifiche Srl) - commerciale@bombardi.it ssistenzagualita@bombardi.it
- 15.40 Efficientamento energetico: sostenibilità e digitalizzazione per le fonderie di oggi e di domani Luca Tiozzo Netti e Francesca Gorga (Schneider Electric) - luca tiozzo-netti@
- 16.00 Conclusione lavori
  - 🔵 Tesi vincitrice del "Premio Studio 2022" di Assofond

#### Seminario on line | AGGIORNAMENTI IN MATERIA DI ENERGIA - Focus sul mercato dell'energia e del gas, approccio all'efficientamento energetico, misure previste dalla Legge di Bilancio 2023 | 08 febbraio 2023 ore 10.30

I crescenti costi di energia elettrica e gas metano degli ultimi mesi, in aggiunta a quelli delle materie prime, hanno aumentato nelle imprese l'attenzione all'ottimizzazione del processo di Energy Management. Comprendere il mercato delle commodities energetiche, mettere in pratica efficaci interventi di efficienza energetica, conoscere ed utilizzare i sostegni governativi, sono solo alcuni passi, ma importanti, che le imprese possono fare nella direzione del contenimento della spesa energetica a vantaggio della competitività.

Confindustria, anche a seguito della recente Legge di Bilancio 2023, organizza il seguente webinar "AGGIORNAMENTI IN MATERIA DI ENERGIA - focus sul mercato dell'energia e del gas, approccio all'efficientamento energetico, misure previste dalla Legge di Bilancio 2023, il prossimo 8 febbraio 2023 alle ore 10.30 in modalità online. L'adesione è gratuita per tutte le imprese associate cui si richiede di iscriversi compilando il modulo on line dal link https://ev.confindustriavenest.it/ev/xlscrizione.xsp?cod=EV23.020.01. Agli iscritti verrà inviato il link per il collegamento

# Workshop #1

Title of the eventHow to save energy and heat?Date and location09.11.2022, ŁódźNumber of participantsThe meeting was attended by 8 people represent	
)	
Number of participants The meeting was attended by 8 people represent	
	ting 7 entities, mainly
(please provide service providers from various sectors.	
attendees' list in annex)	
How was the event The meeting was promoted on Facebook:	
promoted (please https://www.facebook.com/events/536448378	316758/?ref=newsfeed
provide copy of	
invitation, social media	
post, webpage or any	
other materials related to	
the promotion of the	
event)	
Main topics discussed A meeting organized for both SMEs and key act	tors. It discusses ways
(please provide agenda to save energy and heat, both in terms of the tec	chnical and financial
and PPT presentations if solutions used. Attention was drawn to the need	to involve employees
any) in energy saving activities and the DEESME pro-	oject was presented.
Main conclusions         The presentation of the DEESME project intro-	duced the participants
to the possibilities offered by the multi-benefit a	pproach. It was found
to be very practical for SMEs and could bring re-	
the participants did not know about the multi-be	enefit approach
beforehand and were interested in it.	
Feedback from the event Nothing to be underlined.

promotion of the event)		
Main topics discussed (please	The topics discussed during the webinar were legal aspects	
provide agenda and PPT	related to energy efficiency, ISO standards, ways to save energy,	
presentations if any)	tools that can help entrepreneurs, including the DEESME tool	
	and available financing mechanisms.	
	During the meeting, participants were familiarized with the	
	biggest challenges resulting from the energy transformation and	
	presented the standards and benefits of a well-implemented audit	
	and a functioning energy management system in the company.	
Main conclusions	The meeting allowed the participants to learn more about legal	
	aspects, including the EED and national legislation. An	
	important aspect was also the presentation of the outline of the	
	DEESME tool and its operation, which allowed to better	
	illustrate the DEESME approach and its multiple benefits.	
Feedback from the event	Nothing to be underlined.

Workshop #3

Title of the event	Energy efficiency in the company and its multiple benefits (Efektywność energetyczna w firmie oraz jej wielorakie korzyści)
Date and location	23.03.2023, online
Number of participants	The meeting was attended by 6 people representing 5 key actors.
(please provide attendees'	The participants included managers, advisors and consultants.
list in annex)	They were representing: Department of Consulting and
	Information Enterprise Europe Network Górnośląski Fund S.A.;
	Toruń Regional Development Agency S.A.; Association

	"Promotion of Entrepreneurship" in Opole; University of Information Technology and Management in Rzeszów; Chamber of Commerce and Industry in Krakow.
How was the event	Invitations to the workshops were sent by e-mail to 35 institutions
promoted (please provide	associating enterprises, mainly to chambers of commerce and
copy of invitation, social	institutions from the Enterprise Europe Network.
media post, webpage or any	institutions from the Enterprise Europe retwork.
other materials related to	
the promotion of the event)	
Main topics discussed	The meeting began with a brief reminder of the project assumptions
(please provide agenda and PPT presentations if any)	and its goals. The challenges faced not only by companies but also by other stakeholders were discussed in detail, and the barriers that prevent SMEs from carrying out audits and implementing their results were indicated.
	The workshop focused mainly on the discussion part, due to the fact that the main purpose of the meeting was to obtain recommendations from institutions that have the greatest experience and knowledge when it comes to cooperation with
	<ul><li>companies. During the discussion part, the following issues were raised:</li><li>1. In your opinion, are companies aware of the benefits of</li></ul>
	<ul><li>conducting an energy audit and implementing its results?</li><li>2. What incentives could increase the participation of companies in</li></ul>
	energy efficiency measures?
	3. Could promoting the non-energy benefits of audits increase the number of SMEs auditing? What benefits are worth paying
	attention to?
	4. Would the development of information materials for companies increase the number of audits carried out? Would you be willing to share such materials with entrepreneurs?
	<ul><li>5. Would the obligation for auditors to indicate non-energy benefits of audits would allow enterprises to better understand the benefits of implementing energy efficiency measures?</li></ul>
	Each question was thoroughly discussed and we obtained
Main conclusions	recommendations, which are described below.
Main conclusions	Participants pointed out the need to emphasize the financial benefits of any activity of entrepreneurs. It was also noted that
	convincing entrepreneurs to carry out audits and implement their results will be difficult until they are obliged to do them. Audits are often perceived as time-consuming and require high investment costs, and also as not bringing measurable benefits to the company.
	Participants who work with entrepreneurs on a daily basis stated that communication with them is difficult and the means of communication and information should be carefully selected.
	Participants who work with entrepreneurs on a daily basis stated that communication with them is difficult and the means of
	communication and information should be carefully selected. According to them, cooperation with SMEs requires long-term relationship building, as there is a great distrust of new activities and unknown people among them. Therefore, in order to increase the probability of analyzing antropropugate to take actions for analyzing
	probability of encouraging entrepreneurs to take actions for energy efficiency, it would be necessary to present them with examples of

Feedback from the event (what went well, what could have been done differently)

success stories and prepare an official list of certified auditors whom they could trust.

Entrepreneurs are also often concerned about the security of their data and hidden costs and administrative activities. Therefore, all incentives (including financial ones) should contain a clear description of the required activities and be accounted for in a simple way.

Participants emphasized the importance of indicating the nonenergy benefits of audits, but considered it only an addition to the audit, emphasizing that what counts for the entrepreneur is mainly the financial benefit and, possibly, the impact of the implementation of the audit results on the effectiveness of production or sales. The meeting was very fruitful. All participants were active during the discussion and each of them brought important recommendations for the future. Participants expressed their

willingness to continue cooperation.
